

HW 0 Submission Document

MEGN 441: Intro to Robotics

Name: Ari Anaya

CWID: 10920967

Complete the questions below to receive credit for this assignment.

1. How was the install process? This can be the most challenging thing to do with ROS for some folks, depending on their setup. If you had issues, please describe what kind of computer you have and why you think it was having problems.

It was relatively simple. I've worked with Ros and docker in the past so it was not too hard to get it running. I basically had everything installed already.

2. Is there anything that needs to be added to the install guide?

I had to download VcXsrv for windows display passthrough, and tmux is always nice to have since you end up with a ton of terminals before launch files get introduced.

3. Upload a screenshot of turtlesim running on a computer that you have access to.

You can do this course entirely in the BB 136 lab space if necessary, but it's best if you're able to have it on your machine if possible.
